

PREFACE

This special issue contains revised and extended versions of seven papers presented at the 20th International Conference on Foundations of Software Science and Computation Structures (FoSSaCS 2017), which was held in Uppsala, Sweden as part of ETAPS 2017 (April 22-29, 2017). They represent several (but by no means all) areas that are traditionally well-represented at FoSSaCS: higher-order computation, proof theory, probabilistic and categorical semantics.

The contributions were selected from among the 32 papers presented at the conference, on the strength of recommendations obtained during the reviewing process, which involved 101 submissions in total. The extended versions were subsequently refereed according to the usual LMCS standards.

We thank the Program Committee of FoSSaCS 2017 and additional reviewers for their expert advice, and wish to express gratitude to LMCS for hosting the special issue.

Javier Esparza, Andrzej Murawski
FoSSaCS 2017 Guest Editors

All articles have already been published in the regular issues of Logical Methods in Computer Science.
