PREFACE

This special issue of LMCS collects full versions of papers presented at the 27th Conference on Computer Science Logic, which was held at the University of Birmingham, United Kingdom, on September 4–7, 2018.

Computer Science Logic (CSL) is the annual conference of the European Association for Computer Science Logic (EACSL). It is an interdisciplinary conference, spanning both basic and application oriented research in mathematical logic and computer science.

This edition of the conference attracted 86 full paper submissions, of which 36 were selected for presentation. Following the conference, participants were invited to submit an expanded version of their work to this special issue. The submissions we received underwent a reviewing process in accordance with the high standards of LMCS, resulting in the papers presented here.

We thank the authors for their enthusiastic participation, and the anonymous referees for their time and dedication.

Dan R. Ghica, Achim Jung
CSL 2018 Programme Chairs

All articles have already been published in the regular issues of Logical Methods in Computer Science.
